**WE: ROBOT** Jan 04 2021 "For someone interested in practical present day robotics it's a treasure trove. A book-sized Top Trumps rove across the technical domain, with each section containing a photo of the precise robot, an overview of its main components and some context for its aims and purposes." - Electronics Weekly Robots exist all around us. They populate our factories, assist our surgeons and have become an integral part of our armed forces. But they are not just working behind the scenes – impressive inventions such as free-roaming hoovers take care of your household chores and the iPal is set to become your closest friend. David Hambling reveals the groundbreaking machines – once the realm of science fiction – that are by our sides today, and those that are set to change the future forever. From the Reem robocop that polices the streets of Dubai to the drones that deliver our parcels and even the uncanny Gemonoid Hi-4 built to look just like you, here are fifty unique robots that reach into every aspect of our daily lives. We:Robot examines why robots have become embedded in our culture, how they work and what they tell us about our society and its future.

**Mechatronics and Applied Mechanics II** Jun 21 2022 The peer reviewed papers in this 2 volumes set show the latest developments in the field of Mechatronics and Applied Mechanics. In particular, they cover topics of Manufacturing Technology and Processing, Mechatronics and Automation, Mechatronics and Embedded System Applications and Applied Mechanics and Other topics. Volume is indexed by Thomson Reuters CPCI-S (WoS). The papers are grouped as follows: Chapter 1: Manufacturing Technology and Processes, Design, Modelling, Simulation and Mechanical Engineering; Chapter 2: Robotic, Automation, Sensors, Detection and Monitoring Technologies; Chapter 3: Development Electronics, Networks, Information Technology and Algorithms in Systems Applications; Chapter 4: Mechanics, Thermal and Dynamics Systems, Vibration, Noise, Applied Mechanics and Numerical Simulation Applications; Chapter 5: Materials Science and Technology, Material Manufacturing Processes; Chapter 6: Control System Modeling and Applications; Chapter 7: Developments in Medical Technologies and Images Processing Technologies.

*the little book of microcars* Jun 09 2021 After the Second World War Europe was in economic crisis and manufacturing lay in ruins. Materials were in short supply, and factories were forbidden from building aircraft. There was a need for cheap, economical transport, but acquiring a new car was difficult, and secondhand cars were not as readily available as they are today. By the 1950s, a myriad of economy cars had appeared on the market to fill this vacuum. Former aircraft companies – and even a refrigerator manufacturer – turned their hand to producing tiny cars that were often quirky and eccentric. Many of these little cars earned the nickname 'bubblecars' due to their bulbous shape. The 1960s brought with it new levels of affluence, and these microcars almost faded from view. But today, they are enjoying a resurgence of popularity, with many becoming highly-prized collectors items. Increased traffic levels and fuel prices, and a greater awareness of environmental issues, have also created demand for a new generation of microcars, and car makers have responded accordingly with exciting new designs. Illustrated with over 70 colour photographs, this book celebrates the best of these weird and wonderful motoring marvels.

**Replacing Your Boat's Engine** Dec 27 2022 The first in a series of highly practical, hands on, step-by-step photographic manuals, Replacing Your Boat's Engine fills a gap in the market for the DIY boat builder and repairer. It is a subject covered only in piecemeal fashion by the yachting press, which, like general boat repair manuals, can't go into the level of detail Mike Westin does. This is a visual, hand-holding guide, dwelling on the practical details of replacing a boat's engine and related systems as it explains each procedure rather than focussing on the theory (which is relegated to an appendix, for those who wish to go further). Anyone who wishes to upgrade their boat's engine or replace an ailing or broken engine

will find this step-by-step illustrated book a hand-holding godsend.

**Quiet Revolutions** Feb 23 2020 Increasing demands for noise reduction and refinement dictate improvements in technology in many areas of vehicle and power plant design and development. The papers from this IMechE conference consider all aspects of this topic.

A Wild Call Nov 02 2020 Martyn Murray was finding modern life, with all its restrictions and controls, suffocating. Following years of soul-searching, his father's death triggered him into opening the old logbooks and charts to retrace the sailing trips they had once shared together. He determined to revisit those waters and bring home the freedom of the seas. Falling in love with an old ketch in Ireland, he bought and restored her enough to sail back to Scotland. Over the next two summers he cruised Scotland's Western Isles, with one goal: to reach St Kilda – the remotest part of the British Isles, 40 miles from the Outer Hebrides. During his cruising he considered the islanders and their sense of freedom – often restricted by absentee landlords and officialdom. He railed against bureaucracy and commercial enterprise restricting the yachtman's ability to roam free. For parts of his journey he was joined by the beguiling Kyla; a rare, independent spirit who both excited and frustrated Martyn. But much of Martyn's voyaging was undertaken alone, encountering a variety of places, situations and characters along the way. He attempted his long-awaited sail out to St Kilda through the teeth of a storm, believing that achieving this feat would bring him the freedom and clarity that he craved. What he came up against was far more testing and turbulent than the tides and gales of the North Atlantic. As he sailed back to the mainland things fell into place: a sense of achievement in completing the arduous voyage alone, but – most of all – an understanding of who he is, clarity on his relationship with Kyla and a real sense of his own freedom.

**The Little Book of Trikes** Apr 07 2021 Motor trikes have been around since the dawn of motoring, with many starting out as utility vehicles or prototypes of cars. But trikes haven't died out or become mere relics of motoring history – companies all over the world still produce them today, and many will convert a motorcycle into a trike. Trikes are not only huge fun, but can also be a lifestyle choice. They are as diverse as the people who ride them, and this book illustrates the vast range of machines available. The reader will discover a plethora of trike designs and layouts from the late 19th century to the present day. Some influential designs include Piaggio's three wheeled vehicles, the Morgan three wheeler, and the Harley-Davidson Servicar. The book also features the products of companies that convert motorcycles into trikes, and shows some mass-produced examples that you can buy today. Then there are the weird and wonderful machines built by individual enthusiasts – a testament to their engineering skills and true eccentricity ...

Diesel Particulate Emissions Landmark Research 1994-2001 Aug 19 2019 The need for manufacturers to meet U.S. Environmental Protection Agency (EPA) mobile source diesel emissions standards for on-highway light duty and heavy duty vehicles has been the driving force for the control of diesel particulate and NOx emissions reductions. Diesel Particulate Emissions: Landmark Research 1994-2001 contains the latest research and development findings that will help guide engineers to achieve low particulate emissions from future engines. Based on extensive SAE literature from the past seven years, the 45 papers in this book have been selected from the SAE Transactions Journals.

Biofueled Reciprocating Internal Combustion Engines Jul 10 2021 Biofuels such as ethanol, butanol, and biodiesel have more desirable physico-chemical properties than base petroleum fuels (diesel and gasoline), making them more suitable for use in internal combustion engines. The book begins with a comprehensive review of biofuels and their utilization processes and culminates in an analysis of biofuel quality and impact on engine performance and emissions characteristics, while discussing relevant engine types, combustion aspects and effect on greenhouse gases. It will facilitate scattered information on biofuels and its utilization has to be integrated as a single information source. The information provided in this book would help readers to update their basic knowledge in the area of "biofuels and its utilization in internal combustion engines and its impact Environment and Ecology". It will serve as a reference source for UG/PG/Ph.D. Doctoral Scholars for their projects / research works and can provide valuable information to Researchers from Academic Universities and Industries. Key Features: • Compiles exhaustive information of biofuels and their utilization in internal combustion engines. • Explains engine performance of biofuels • Studies impact of biofuels on greenhouse gases and ecology highlighting integrated bio-energy system. • Discusses fuel quality of different biofuels and their suitability for internal combustion engines. • Details effects of biofuels on combustion and emissions characteristics.

Agricultural Engineering Aug 11 2021 A broad coverage of basic & applied research projects dealing with the application of engineering principles to both food production & processing. Land and water use; Agricultural buildings; Agricultural mechanisation; Power & processing; Management & ergonomics. About 450 papers from over 50 countries worldwide.

**1st World Conference on Biomass for Energy and Industry** Aug 23 2022 The 1st World Conference and Technology Exhibition on Biomass for Energy and Industry, held in Sevilla in June 2000, brought together for the first time the traditional European Conference on Biomass for Energy and Industry and the Biomass Conference of the Americas, thus creating the largest and most outstanding event in the worldwide biomass sector. The conference elaborated innovative

global strategies, projects and efficient practice rules for energy and the environment at a key stage in the industry's development. New concepts and projects were highlighted to increase the social and political awareness for a change in worldwide resource consumption and to promote economically, socially and environmentally sustainable development for the next millennium. In 2 volumes, the Proceedings include some 470 papers essential to an understanding of current thinking, practice, research and global developments in the biomass sector - a vital reference source for researchers, manufacturers, and policy makers involved or interested in the use of biomass for energy and industry.

**Sustainable Automobility** Apr 19 2022 We have been trying to make cars cleaner and more efficient, but has this really made them more sustainable? This book argues, within the context of sustainable consumption and production, that we should see the car as a natural system, subject to nature

Energy, Transportation and Global Warming May 20 2022 This book presents a holistic view of climate change by examining a number of energy and transportation technologies and their impact on the climate. High-quality technical research results from specific test-cases around the globe are presented, and developments in global warming are discussed, focusing on current emissions policies from air and maritime transport to fossil fuel applications. Novel technologies such as carbon capture and storage are investigated together with the corresponding process and systems analysis, as well as optimization for mitigating CO<sub>2</sub> emissions. Water resources management, waste water treatment, and waste management issues are also covered. Finally, biomass, hydrogen and solar energy applications are presented along with some insights on green buildings. Energy, Transportation and Global Warming is of great interest to researchers in the field of renewable and green energy as well as professionals in climate change management, the transportation sector, and environmental policy.

Harvest and Post-harvest Technology of Fish May 28 2020

Proceedings of the FISITA 2012 World Automotive Congress Dec 03 2020 Proceedings of the FISITA 2012 World Automotive Congress are selected from nearly 2,000 papers submitted to the 34th FISITA World Automotive Congress, which is held by Society of Automotive Engineers of China (SAE-China) and the International Federation of Automotive Engineering Societies (FISITA). This proceedings focus on solutions for sustainable mobility in all areas of passenger car, truck and bus transportation. Volume 3: Future Automotive Powertrains (I) focuses on: •Alternative Fuel and New Engine •Advanced Hybrid Electric Vehicle •Plug-in Electric Vehicle Above all researchers, professional engineers and graduates in fields of automotive engineering, mechanical engineering and electronic engineering will benefit from this book. SAE-China is a national academic organization composed of enterprises and professionals who focus on research, design and education in the fields of automotive and related industries. FISITA is the umbrella organization for the national automotive societies in 37 countries around the world. It was founded in Paris in 1948 with the purpose of bringing engineers from around the world together in a spirit of cooperation to share ideas and advance the technological development of the automobile.

The A-Z of popular Scooters & Microcars Jan 24 2020 This is mainly a photographic reference book to classic scooters and microcars with specification data presented in A to Z order of manufacturer. There are also nostalgic recollections by the author based on ownership and personal experience. In the middle 1950s as a teenager Mike Dan became interested in these then newly-arrived forms of transport. Eventually Mike owned a series of scooters and a microcar. He became involved in Scooter and Microcar Clubs and took part in many local and national sporting events gaining a collection of awards and trophies. In the mid 1980s he had time again to visit many indoor and outdoor classic vehicle shows. Eventually this led to a renewed personal involvement in the restoration of a series of over twenty classic scooters and three classic microcars. This highly entertaining book and reference source is therefore written with the authority of a lifetime enthusiast.

**Reconstructing the Regional Economy** May 08 2021 The book focuses on regional and economic change in Eastern and Central Europe, using Slovakia as a case study. It explains the relationship between industrial change and regional development and discusses fragmentation within the context of the legacy of the state socialist industrialization model.

Green Diesel Engines Jun 28 2020 With a focus on ecology, economy and engine performance, diesel engines are explored in relation to current research and developments. The prevalent trends in this development are outlined with particular focus on the most frequently used alternative fuels in diesel engines; the properties of various type of biodiesel and the concurrent improvement of diesel engine characteristics using numeric optimization alongside current investigation and research work in the field. Following of a short overview of engine control, aftertreatment and alternative fuels, Green Diesel Engine explores the effects of biodiesel usage on injection, fuel spray, combustion, and tribology characteristics, and engine performance. Additionally, optimization procedures of diesel engine characteristics are discussed using practical examples and each topic is corroborated and supported by current research and detailed illustrations. This thorough discussion provides a solid foundation in the current research but also a starting point for fresh ideas for engineers involved in developing/adjusting diesel engines for usage of alternative fuels, researchers in renewable energy, as well as to engineers, advanced undergraduates, and postgraduates.

**Royal Enfield Bullet** Mar 06 2021 Despite being one of the most successful motorcycles of all time, the Royal Enfield

Bullet has had a very chequered history. Its story begins in the 1930s and by the 1950s it was at the height of its popularity in post-War Britain. Then it became a stalwart of the Indian Army and manufacture transitioned from Britain to India. The near-collapse of the Royal Enfield marque in the 1990s almost meant the end of this classic motorbike, but with the involvement of the Eicher Group from 2001 onwards, the updated Bullet generated new interest and renewed its original commercial success, just like a phoenix rising from the ashes. With over 200 photographs, this book describes the origins of the Royal Enfield company and the pre-war Bullets from 1932 and the relaunch of the Bullet in 1949 with its radical swinging-arm frame. Derivative models such as the 350 and 500, as well as those for competition and road are covered as well as specials such as diesels, V-twins, Egli and big-bore Bullets. The development story behind the lean-burn, electric-start and 5-speed updates is discussed as well as the UCE - the all-new Bullet from 2008 and the Classic and its design story. Finally, the evolution beyond the Bullet is covered which includes the Continental GT and Himalayan 650 twins.

*Gold Rush* Oct 13 2021 'Would you own the GOLD or would the GOLD own YOU?' When Jim Richards left home to make his fortune in a gold rush, he had no language skills, no money and no idea. But when he found diamond-filled potholes in the remote rivers of Guyana, his problems really began. Chasing gold and diamond rushes around the world, Richards worked with local miners in some of the maddest, baddest and most dangerous places on earth. His dramatic journey ranges from the piranha-infested rivers of South America to the blazing deserts of Australia, from the world's biggest mining scam in Indonesia to the war-torn jungles of Laos. To find the gold, first Jim had to find himself. He learned to dig deep and discover the resilience and fortitude needed to overcome isolation, disease, equipment disasters and gun-toting criminals to come out on top. *Gold Rush* is a blood-and-guts treasure hunt - the ultimate adventure story.

*Over the Top* Apr 26 2020 Only one person has ever sailed vertically around the world - Adrian Flanagan. Sailing horizontally is difficult enough, crossing thousands of miles of ocean only to get near land at the Capes and battle treacherous currents. However, hundreds of sailors have still managed it. Adrian became obsessed with the idea of sailing vertically around the world as a boy, before he even knew whether it was possible. Thirty years later he managed it. This is his own account of his remarkable adventure. It was an epic challenge, sailing through the perilous waters around Cape Horn and across the remote, hostile stretch of the Russian Arctic. He survived being washed overboard, capsizing, a close encounter with pirates, and also managed to treat not one but two dislocated wrists - all of this alone, a thousand miles or more from anyone who could help him complete his quest. It wasn't all high drama, however. Adrian experienced moments of awe-inspiring beauty - being accompanied by a pod of whales, and swimming with dolphins. This is a timeless and unique story, pacily written with a sense of humour, but which captures the zeal and determination required to accomplish something nobody else has ever done before.
